LAYOUT SHEET, EXAMPLE "A", RELEASED 10/30/2009

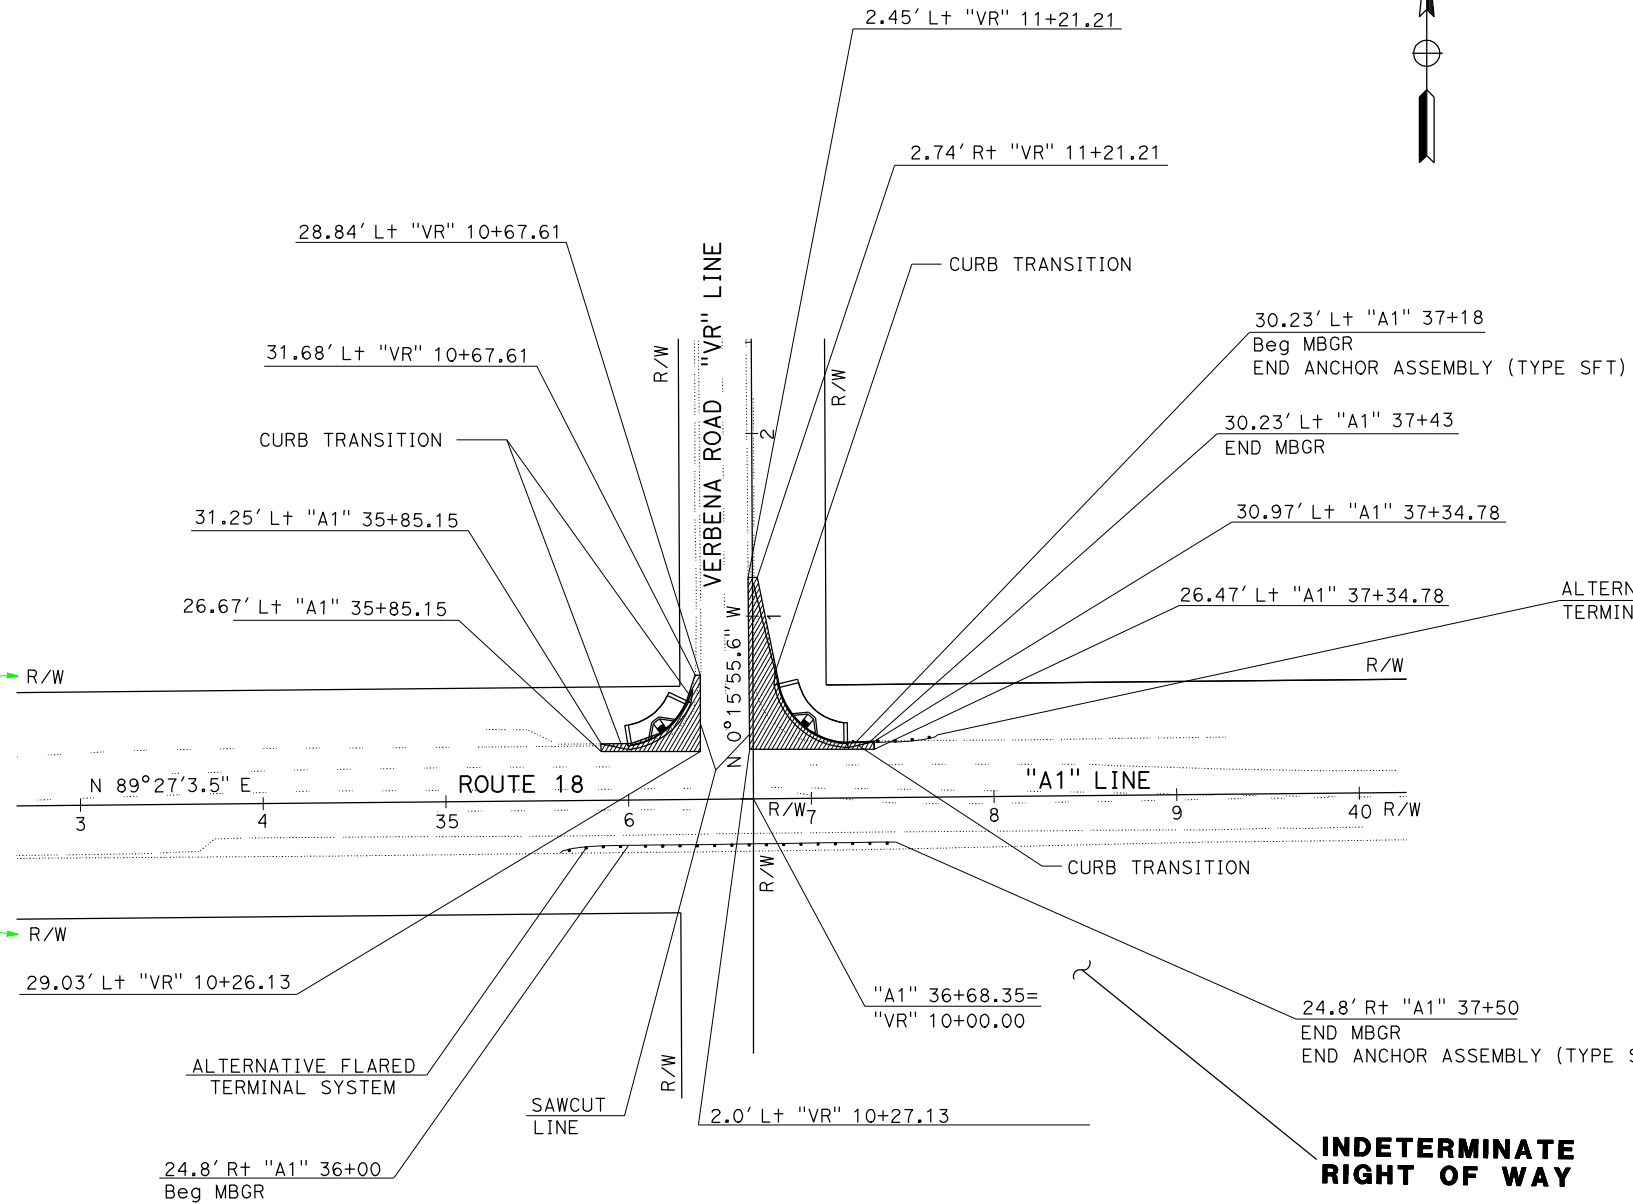

METAL BEAM GUARD RAILING

Identify location of MBGR by station and offset. "BEGIN" and "END" callouts are to follow the increasing stationing, not the flow of traffic.

The callout "MBGR" is sufficient when only one type of MBGR is used in the project. The type of MBGR can be identified under the "NOTES". If more than one type of MBGR is used, identify the type with each callout.

Identify the type of MBGR end treatments, "END ANCHOR ASSEMBLY" and "TERMINAL SYSTEM".

If MBGR is being attached to a wall or bridge rail, identify when "TRANSITION RAILING" is being used.

The right of way label "R/W", is to be placed outside of the Caltrans right of way.

When the plan view sheet consist entirely of indeterminate right of way, do not show any right of way line, but use the appropriate note (AC=NOTE35).

If both right of way and indeterminate right of way exists within the area shown on the plan view sheet, identify the right of way line as usual and identify the indeterminate area by using bold text, leader line and a tilde.

TX = 10, FT = 43, WT = 0, LV = 33
