

ATTACHMENT 1

15-14 Loads for Temporary Highway Structures

	Over Vehicular and/or Pedestrian Traffic	Not Over Vehicular or Pedestrian Traffic
Structures Carrying Non- Vehicular Loads Only	Vertical loads - same as for pedestrian overcrossings plus any special equipment loads requested by the Contractor.	Vertical loads - same as for pedestrian overcrossings plus any special equipment loads requested by the Contractor.
	2. Lateral loads in both the longitudinal and transverse direction - the larger of:	Lateral loads in both the longitudinal and transverse direction - the larger of:
	a. Construction staging.	a. Construction staging.
	b. Load combinations listed in the Department's Falsework Manual.	b. Load combinations listed in the Department's Falsework Manual.
	c. Design Seismic Hazard as described in MTD 20-2.	c. 10% dead load, factored by 1.0 and applied at the center of gravity.
Haul Bridges (Structures Supporting Construction Equipment)	1. Vertical-dead loads with anticipated vehicular load combinations, including any special equipment loads. See MTD 15-15 on Material Hauling Equipment loads, or MTD 15-16 on construction equipment loads.	Vertical - dead loads with anticipated vehicular load combinations, including any special equipment loads. See MTD 15-15 on Material Hauling Equipment loads, or MTD 15-16 on construction equipment loads.
	2. Lateral loads in the longitudinal direction (parallel to the centerline of structure) - the larger of:	Lateral loads in the longitudinal direction (parallel to the centerline of structure) - the larger of:
	 a. Braking force - 15% LL applied 6 ft above deck surface. 	a. Braking force - 15% LL applied 6 ft above deck surface.
	b. Design Seismic Hazard as described in MT 20-2.	b. 10% dead load, factored by 1.0 and applied at the center of gravity.
	3. Lateral loads in the transverse direction (perpendicular to centerline of the structure) - the larger of:	3. Lateral loads in the transverse direction (perpendicular to centerline of the structure)-the larger of:
	 Design Seismic Hazard as described in MTD 20-2. 	a. 10% dead load, factored by 1.0 and applied at the center of gravity.
	b. Load combinations listed in the Department's Falsework Manual.	b. Load combinations listed in the Department's Falsework Manual.
