Coastal Bike Trail Connector - Ocean Boulevard, Long Beach

Applicant: City of Long Beach

Located within the Harbor District, Port of Long Beach, this newly constructed class 1 facility follows the alignment of the Ocean Boulevard Bridge, from Pico Avenue to the Golden Shore waterfront. Adjoining from the port, the Ocean boulevard connector features an elevated path and protected bikeway for leisure and work accessibility.

City of Long Beach

The Trail

The newly constructed portion of the connector crosses the Los Angeles River and allows for easy access to downtown Long Beach. Once bicyclist reach the Golden Shore, the bike trail feeds into the L.A. River path, making for more fluid connectivity to areas that border the river, or continue to the downtown, ferry connections, and bike and pedestrian beach pathways. Continuing in the western direction, the trail runs parallel along the 710 Freeway dead ending at the major industrial area.

A magnificent example of ped and bike safety measures were integrated into this project, in the form of protective barriers, signage, signalized crossings, and more. Piloted by the Port of Long Beach and the city of Long Beach, the grand opening boasted a crowd of more than 200 bicyclist, and 300 people in total for the celebration of this landmark path.
